

Image Effects

2.01 Investigate graphic image design.

Cloning

- Copying part of an image and using it to replace unwanted parts of the image.
- Examples of use:
 - Remove blemishes on a model's skin
 - Brush up text on a scanned image

2

Cropping

- Cutting out part of an image
- Original image retains same file size
- Cut image can be saved as new object

1.02 Investigate image editing.

3

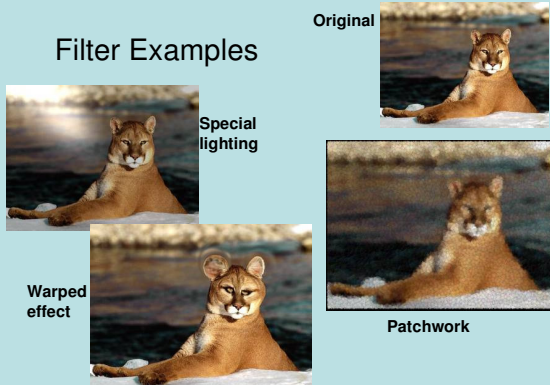

Filters

- Used to apply special effects to an image that would be too difficult to create manually.
- Examples of use:
 - A weaving pattern
 - Liquefying

1.02 Investigate image editing.

4

Filter Examples

1.02 Investigate image editing.

5

Gradient

- Filling an object/image with a smooth transition from one color to another.
- Examples
 - Dark blue, gradually becoming white
 - Red fading to orange.

1.02 Investigate image editing.

6

Layers

- Compiling multiple pictures or objects together into one image
 - Layers can be turned on or off
 - Elements can be colored, layered, and resized individually

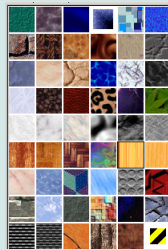

Layers on . . . Layers off

Patterns and Textures

- Patterns – raster graphics used to fill an object or selection
- Textures – used to create filters and backgrounds

Rotating

- Pivoting an object around its center point

Transparency

- Removing the background color of a raster image to make it “see-through”
- Allows image to blend in with its background
